

AI comic story creation

SCENARIO																	
Entice				Enter			Engage			Exit			Extend				
How does someone initially become aware of this process?				What do people experience as they begin the process?			In the core moments in the process, what happens?			What do people typically experience as the process finishes?			What happens after the experience is over?				
Steps	What does the person (or group) typically experience?	Has a story idea	Discovers ComicCraft	Opens the web app	Types the story prompt	Chooses character, setting, tone and art style	Clicks Generate	AI creates a 5-panel outline	AI writes narration and draws each panel	Views the comic preview	Changes tone or style and regenerates	Clicks to download the comic	Sees the export success page	Opens the saved PDF	Shares or prints the comic	Creates another comic	
Interactions	What interactions do they have at each step along the way? Things: digital touchpoints or objects they use Places: where are they? People: who do they see or talk to?	Own imagination, a school task or AI art seen on social media	Search engine, friends, social media	ComicCraft home page in the browser	index.html input form	Form fields: character name, setting, tone, art style	Submit button sends a POST request to /generate	FastAPI backend with Gemini 1.5 Flash (generate_outline)	Gemini 1.5 Pro (generate_story) and Stable Diffusion (generate_image)	comic_preview.html with images, titles and narration	Back to the input form, full pipeline runs again	layout_builder.py and exporters.py (FPDF) build the PDF	export_success.html confirmation page	Timestamped PDF saved in static/exports	Email, messaging apps, social media, printer	ComicCraft home page again	
Goals & motivations	At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me turn my idea into a comic without drawing skills	Help me find an easy tool I can try quickly	Help me understand what I can create here	Help me describe my story in a few words	Help me make the comic match my creative vision	Help me trust that the result will be good	Help me get a clear panel-by-panel storyline	Help me get a cohesive story with vivid images	Help me see if it matches my idea	Help me adjust the mood until it feels right	Help me save my comic in one step	Help me feel sure the file was saved	Help me see my finished comic	Help me show off what I made	Help me try new stories and styles	
Positive moments	What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?				Typing a simple idea is easy; no design skills needed		Fun to pick tone and art style (anime, comic book, funny, dramatic)			Exciting to see the story come to life panel by panel		Clear confirmation that the download worked		Proud to share a comic made from my own idea			
Negative moments	What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?						Unsure whether the AI will match what I imagined		Waiting while story and images are generated, especially on slower computers		Regenerating repeats the whole pipeline, even for a small change		Images may not match the prompt exactly				
Areas of opportunity	How might we make each step better? What ideas do we have?					Show sample prompts and art-style previews on the form				Add a progress indicator while panels are generated		Let users edit panel text before export		Regenerate a single panel instead of the whole comic		Add a one-click shareable link or copy-to-clipboard
