

Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	SWTID-2026-1429
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Creating a comic requires storytelling, scriptwriting and illustration skills, plus a lot of time or money. Non-artists and casual users with a story idea have no easy way to turn it into a cohesive, illustrated comic. Existing tools either give only text or only images, and rarely let users control character, setting, tone and art style.
2.	Idea / Solution description	ComicCraft is a FastAPI web application. The user enters a story prompt, main character name, setting, tone and art style. Gemini 1.5 Flash generates a structured 5-panel outline, Gemini 1.5 Pro expands it into narration and character dialogue, and Stable Diffusion (via Hugging Face Diffusers) creates a comic-style image for each panel. The comic is previewed on a Jinja2 web page and can be downloaded as a PDF built with FPDF.
3.	Novelty / Uniqueness	Combines two Gemini models (Flash for fast structured outlines, Pro for creative narration) with Stable Diffusion in one automated pipeline that produces story and illustrations together. Users can change tone or art style (e.g., funny, comic book) and regenerate the whole comic, so every comic is unique. It offers both an easy web interface and API endpoints, and exports a ready-to-share PDF.
4.	Social Impact / Customer Satisfaction	Makes comic creation accessible to non-artists, students, teachers and hobbyists, encouraging creativity and storytelling. Users save time and effort, get a personalised comic that matches their vision, and can save, print or share it as a PDF, which increases satisfaction. It can also support educational storytelling.
5.	Business Model (Revenue Model)	Possible revenue streams: a freemium model with limited free comics per day and paid plans for more generations and higher-resolution images; premium art styles and templates; paid

		PDF exports without watermark; and subscriptions or licences for schools and content creators.
6.	Scalability of the Solution	The FastAPI backend with a modular structure (separate files for outline, story, image, layout and export) is easy to extend and deploy on cloud servers. Image generation can be moved to GPU servers and requests handled asynchronously to serve more users. More languages, art styles, longer comics, character consistency and user accounts can be added later.
